

VRcontext

## WHAT IS THE NEW VRHOSTID

The new license system used by VRcontext, which is based in Macrovision's Flexnet license system, requires an ID (**VRHOSTID**) that will allow Walkinside to run in the user's machine.

This **VRHOSTID** is a unique ID that all the machines have and VRcontext provides the required tool to acquire, **GetVRHostID.exe**.

The user should follow the next steps to get the **VRHOSTID** and be able to obtain the license needed from VRcontext:

- Step 1:** Download **GetVRHostID.exe** tool from <http://www.vrcontext.com/support> and save it on the machine where Walkinside will run (Node-Lock license) or where the License server will run (Floating license).
- Step 2:** Execute the **GetVRHostID.exe** tool and check that a Hostid.txt file is been created.
- Step 3:** Send this text file to the VRcontext sales department or to a Walkinside Reseller by email.
- Step 4:** VRcontext or the Reseller will send the license back in order to allow the user run the new version.

### The Hostid.txt file

Here is an example of the hostid.txt:

```
VRHOSTID=B73956D79192 (The VRHOSTID)  
HOSTNAME=Name of the machine  
IP_address=192.168.123.23 (IP address of the machine)
```
